1. In the 1960s and 1970s, microcomputers and minicomputers became available to businesses and individuals.

Thanks to what technology did it become possible?

2. The first recognized use of the word “computer” was from 1613.

What did the “computer” use to mean before this word started to refer to devices?

3. Cryptography is the study of secure communications techniques that allow only the sender and intended recipient of a message to view its contents.

What does a massive use of cryptography lead to?

4. An information society is a society where the usage, creation, distribution, manipulation and integration of information is a significant activity.

Which of the following statements is not true about the Information Society?

5. Prior to the transistor’s discovery in 1947, the only way to execute amplification of a weak current in an electronic circuit was to use a vacuum tube.

What were the initial advantages transistors demonstrated over small vacuum tubes?

6. Most businesses don’t want to deal with non-core tasks, which include the IT infrastructure. And if it has to pay for a data center, it has to function at maximum efficiency.

Crisis situations are exacerbating resource shortages. Enterprises are cutting IT budgets, investing less in long-term projects in general and in data centers in particular. It is impossible to abandon IT altogether – it is equal to giving up doing business, but phased financing and speed of commissioning come to the fore.

What do today’s IT managers face while having limited budgetary resources to expand data centers?

7. A company deals with tasks which take a long time to complete. Each worker has their duties that can be done offline. It’s essential for managers to estimate how long a task will take to be completed. The company uses a time-sharing system and all the users are able to finish their work in the system at the same time. However they noticed their gadgets to slow down fast. Also the workers notice the inconvenience while managing large workloads.

What may be causing these problems? What decision should the company make?

8. A UNIX based operating system, was originally developed in the mid-’90s. Its major offerings include scalability, interoperability, data management and security, all of which are crucial for businesses that need high-end operating software. In addition to the above, it is also known for its web, database and Java-based services and its unlimited capacity for helping in managing file system and databases is a big plus as well.

Which operating system is described:

25. International Business Machine's first mass-produced electronic stored-program ... was IBM
26. In 1944 Howard Aiken developed ... that could perform calculations involving large numbers
27. The first calculating device was ...
28. A mechanical calculator invented by Blaise Pascal in 1642 is called ...
29. Match computers to their creators:
30. Match the sentence with the time it was written:
31. Arrange the events chronologically:
32. Arrange the inventions chronologically:
33. According to the research company comScore Networks in 2019, the number of Internet users worldwide amounted to ... people
34. The second most important direction for strengthening accounting policies in the information society is the massive use of ...
35. According to the ... Institute, by 2055 unemployment will reach around 50 % of the total labor force (give or take 20 years depending on artificial intelligence growth)
36. According to Professor W. Martin, the information society is understood as a "developed ... society" that arose primarily in the West
37. technologies are one of the most basic through technologies in many documents and by many experts
38. The author of The Production and Distribution of Knowledge in the United States (1962) is ...
39. According to the ... criterion highlighted by W. Martin, information acts as an important stimulant for changing the quality of life, «information consciousness» is formed and affirmed with wide access to information
40. The unfair situation in society when some people have more opportunities, money, etc. than other people is called ...
41. The stage of society's development when the service sector generates more wealth than the manufacturing sector of the economy is called ... society

42. ... is the branch of ethics that focuses on the relationship between the creation, organization, dissemination, and use of information, and the ethical standards and moral codes governing human conduct in society

43. Cell phones are ..., making it possible to provide everyone with communication channels

44. The term "... " refers to the social, economic, technological, and cultural changes that have occurred as a result of the rapid development and extensive use of information and communication technologies (ICTs) in modern countries, particularly since World War II

45. The most significant worldwide danger is the rise in labor ... when information technologies are implemented

46. Cell phones are digital, it was the transition to digital that made it possible to provide everyone with communication channels, but without ... in SIM cards, cellular communications could not become mass

47. W. Martin emphasizes the idea that ... is "a key element of the information society"

48. Match the approaches to understanding the information society and their authors:

49. Match the abbreviations and transcripts:

50. Match the people and the terms they put in use:

51. Put today's potential of automation in the USA according to McKinsey Global Institute from the lowest to the biggest:

52. Put the number of Internet users worldwide from the smallest to the largest:

53. The transistor's most significant advantage over the best vacuum tubes was that it consumed far ...

54. Talent, intellectual property, finance, and technical experience will always be in demand as the global economy is revolutionised by ... technology

55. According to current rates of growth in microelectronics, ... of the world's population will own a notebook-size computer with the capacity of today's huge computers in roughly a decade

56. For the past ... years, the design of computer processors has remained stable

57. Bell Telephone Laboratories' John Bardeen, Walter H. Brattain, and William Shockley devised the ... in 1948

58. Vacuum tubes were discovered to have a number of flaws, for example ... (choose 3 correct answers)

59. The transistor's most significant advantage over the best vacuum tubes was that it ...

99. Data ... is the process of combining data from multiple sources into a single system or in close proximity to one another, such as on a display, so that the user may access them from a single platform
100. ... is a technical person who builds new software systems
101. ... is the world's dominant software platform
102. ...business is the sale of goods and services to consumers, in contrast to wholesaling, which is sale to business or institutional customers
103. ... is something that needs great mental or physical effort in order to be done successfully and therefore tests a person's ability
104. ... is data that provides information about other data, but not the content of the data, such as the text of a message or the image itself
105. ... is the administration of an organization, whether it is a business, a non-profit organization, or a government body
106. ... is the property of a system to handle a growing amount of work by adding resources to the system
107. ... heterogeneity is when database schema or datasets for the same domain are developed by independent parties, resulting in differences in meaning and interpretation of data values
108. ... business is the sale of goods and services to consumers, in contrast to wholesaling, which is sale to business or institutional customers
109. Establish a correspondence between the abbreviation and the definition:
110. Establish a correspondence between the concept and the definition:
111. Identify the sequence of information management steps:
112. Arrange the stages of the development of the internet in chronological order:
113. The OS-9 family of real-time operating systems has been in use for over ... years, with more than 5 million installed copies
114. ... means compilers produce code that does not contain absolute addresses
115. ... AE has been ported to leading high-availability CompactPCI platforms such as the CPX8000 from Motorola Computer Group

116. ensure the uninterrupted operation of vital systems, therefore, if a failure occurs or some illegal operations are performed, the OS must diagnose them, if necessary, block the program or isolate applications from each other, initiate recovery and protection of other programs or the system itself
117. RTOS are operating systems that are characterized by ... (choose 3 correct answers)
118. Context switch time is the time interval from ...
119. The benefits of specialized RTOS include ... (choose 2 correct answers)
120. ... systems are computerized systems used in manufacturing to track and document the transformation of raw materials to finished goods
121. ... is a group of several proprietary graphical operating system families, all of which are developed and marketed by Microsoft
122. The interrupt ... is the time interval from an event on an object to the execution of the first instruction in the program for processing this event
123. ... time is the time interval from the moment a physical interrupt occurs to the start of execution of the first instruction of the user task to which the interrupt is intended
124. ... switch time is the time interval from the end of the execution of the last instruction of one process (thread) to the start of the execution of the first instruction of the next process (thread)
125. ... latency is the time interval from the end of the execution of the last user interrupt handler instruction to the execution of the first instruction of the process that entered the state due to this interrupt
126. ... memory is a memory management technique that provides an idealized abstraction of the storage resources that are actually available on a given machine which creates the illusion to users of a very large (main) memory
127. Match the units of data measurement with their characteristics:
128. Match the components of QNX with their characteristics:
129. Match the concepts with their characteristics:
130. Establish a correspondence between RTOS and their types:
131. Arrange the operating systems in chronological order of their release dates:

132. Arrange the states of tasks in typical RTOS designs in chronological order:

133. Real-time operating systems (RTOS) ... a special type of system software that is used to create and manage RTS

134. The time interval determines how often each of the active processes ... receive control under the given time slicing parameters

135. Inheritance ... that a thread that blocks a resource inherits the priority of the thread it blocks

136. Some of the RTOS are distributed all over the world, the number of installations reaches hundreds of thousands, which is not bad for industrial systems, while others are designed for a specific microcontroller model and the number of copies sold ... exceed two or three dozen

137. The disadvantage of the Self-Hosted RTOS is that most of the listed OS features are not used during the operation of an industrial computer and, therefore, ... computer resources in vain

138. QNX ... produced by QNX Software Systems (USA) and is designed for high-critical applications that operate smoothly for years

139. The microkernel, process manager, device manager, file system manager, network manager belong to ...

140. RTOS are operating systems that are characterized by ... (choose 3 correct answers)

141. The interrupt latency is the time interval from ...

142. Limited ... resources are determined by the hardware features of the PC on which the RTS is operating

143. When a new driver is added to the system, no side effects can occur in the form of, for example, a conflict with other ...

144. ... is a bottleneck in most operating systems and usually creates significant problems for RTOS

145. The ... protocol is not based on any of the common network protocols such as IPX or NetBios and has a number of qualities that make it unique (give the abbreviation)

146. ... is a commercial Unix-like real-time operating system, aimed primarily at the embedded systems market, have been implemented in many hundreds of companies, including such well-known and large ones as Du Pont, Ferranti-Packard, General Motors, Kodak and others

147. ... by Microware System Corporation (USA) belongs to the class of UNIX-like systems and is a highly configurable high-performance real-time system

148. Match the systems and their characteristics:

149. Match the operating systems and their release dates:

150. Match the units of data measurement with their characteristics:

151. Match the operating systems and their characteristics:

152. Arrange the units of measurement of the data in ascending order:

153. A real-time operating system (RTOS) is an operating system (OS) for real-time applications that processes data and events that have critically defined time constraints

Give a proper explanation of the predictability of RTOS.

154. It is important to ensure that the ... data is accurate and relevant

155. Making information accessible is a challenge that frequently causes problems for ...

156. ... are important because they promote inter-service interoperability, meaning exchanging and making use of information, and interoperability between various component systems within the same service

157. Engineers still have problems ... with the use of standards, and quite often with their misuse and misunderstanding

158. Data administrators, as well as policymakers, must keep a balance between two ... aims

159. Nothing is more ... to a user than to try to use a new system that has turned functionality that previously was easy to use, into an obscure procedure that is difficult to use

160. ... is the person responsible for accomplishing all project objectives

161. The standard markup language for documents designed to be displayed in a web browser is ...

162. ... is a person who creates the high-level design of a technical system

163. ... is an organized collection of data stored and accessed electronically

164. Four different data groupings are possible based on the four different ...

165. ... is a difficulty that develops when a solution that works for a small data set fails to function for a much larger data set due to a combinatorial explosion, such as in comparands

210. Match the main characteristics of the information society according to the following criteria by W. Martin:

211. Match the sentence with the time it was written:

212. Put the number of Internet users worldwide from the largest to the smallest:

213. According to the research company comScore Networks in 2019, the number of Internet users worldwide amounted to 747 million people. The United States has the largest audience of Internet users - 153.4 million people, that is, almost every second American regularly goes online. In second place is China - in China today 86.8 million Internet users. Russia still occupies 13th place in terms of the number of people connected to the Network - 12.7 million people. However, Africa with 800 million people accounts for only 1 % of the total number of its users in the world, with 90 % of them living in South Africa. Identify the type of information society problem in the above case study.

214. ... is the unfair situation in society when some people have more opportunities, money, etc. than other people

215. The last decade's technological advancements have played a ... part in the formation of modern society

216. The development of integrated circuits and storage devices has continued at an exponential rate; each subsequent halving of component size now takes ...

217. Nanoelectronics is the most ... breakthrough in technical development

218. The early transistors were not only larger than the smallest tubes, but they were also more ...

219. The transistor's most significant advantage over the best vacuum tubes was that it consumed far ...

220. The introduction of microelectronic circuits did not, for the most part, modify the ... of the basic functional units: transistors, resistors, capacitors, and other similar components were still used in microelectronic devices

221. Bell Telephone Laboratories' John Bardeen, Walter H. Brattain, and William Shockley devised the bipolar transistor in ...

222. ... integrated circuits are the name for the initial generations of commercially produced microelectronic devices (SSI)

223. The advent of ways for creating the numerous functional units on a crystal of semiconductor materials was critical to the development of ...

224. Charge carriers from both polarities are involved in the operation of ... transistors

225. The metal-oxide-semiconductor field-effect ..., which stands for MOSFET, is the most common in microelectronics

242. The ... is a small-scale special-purpose electronic digital machine for the solution of systems of linear algebraic equations and the first electronic computer incorporating vacuum tubes for digital computation

243. ... are made for program logic and for computer memory

244. Open the brackets, put the verb in the correct form in sentence: "The power of computers (double) ... roughly every 18 months to 2 years since the 1960s"

245. Open the brackets, put the verb in the correct form in sentence: "What will the computers of the future (look) ... like?"

246. Open the brackets, put the verb in the correct form in sentence: "Displays (attain) ... VGA resolution by 1988, and 256-color screens were available by 1993"

247. Open the brackets, put the verb in the correct form in sentence: "Resolutions and colors of computers (progress) ... quickly by 2022"

248. Open the brackets, put the verb in the correct form in sentence: "Years ago this service (can) ... be used to run algorithms and experiments, and explore tutorials and simulations around what might be possible with quantum computing"

249. Open the brackets, put the verb in the correct form in sentence: "Around the same period Intel (create) ... three microprocessor designs"

250. Open the brackets, put the verb in the correct form in sentence: "The microchip which (be) ... a key component in the development of the personal computer"

251. Open the brackets, put the verb in the correct form in sentence: "In 1944 Howard Aiken (develop) ... Mark I that could perform calculations involving large numbers"

252. Match machines to their characteristics:

253. Match computers to their characteristics:

254. Arrange the computers in chronological order of their creation:

255. Arrange the computers in chronological order of their creation:

256. The description of a type of microcomputer is down below:

"This type of microcomputer is just like a Mobile Device, but bigger than Smartphone and smaller than Notebook Computer. Just like Totally Smartphone feature like Touch screen display, power full Battery Backup and we can calling and receiving call
